

# Cybersecurity at Home Checklist

A recent University of Chicago study found that 72% of workers surveyed would like to work from home for at least 2 days a week, and 32% said they would like to work from home permanently. This presents a unique set of security challenges for small and medium enterprises given the risks involved. Secure your business from outside threats by ensuring your team follows IronTech Security's At-home Cybersecurity Checklist.

- Secure Wireless Routers
- Change the name of your router
- Install enterprise grade firewalls and security software on all devices
- Ensure that any device connected has security software updated
- Back up all data on remote servers
- Store data in an additional alternative locations

## Avoid a catastrophic cyber attack!

Implementing the measures outlined in our checklist into your safety protocol could be the difference between cleaning up a multi-million dollar loss due to a security breach or... just another Tuesday.

Contact our team of cybersecurity specialists to create a customized business security plan built with the finest technology available today.
